

B-AY-D/PR – Probes – Double Assembly

Description

The double probe assembly is used for transferring fuel to ships equipped with a single or double probe receiver. The double probe assembly consists of the probes and carrier assembly. The upper probe is in a fixed position while the lower probe is clamped to a sliding mechanism. The mechanism allows the lower probe to align first with the lower receiver of the double probe receiver, then slides back until the upper probe is engaged in the upper receiver.
