

B-S/P/REC – Receivers – Single Probe

Description

The single probe receiver is used to receive fuel from ships equipped with either the single or double probe senders. The single probe receiver has internal tapering surfaces which provide a self-aligning feature for proper engagement of the probe. Two spring loaded flags provide visual indication of proper engagement of the probe and the receiver. The end of the receiver is configured to connect to one end of the probe receiver hose and pads are provided for attachment to the swivel arm.

Rebuild kits and spare parts kits are available upon request.
